

Monitoring and Evaluation framework for the green waste management program,

Tuvalu is highly vulnerable environmental risks, including internal risk factors such as solid waste disposal. Green waste management is one of the key challenges facing the country; particularly in Funafuti due to high population densities and declining landfill availability.

The Government of Tuvalu is therefore developing the Tuvalu National Integrated Waste Policy and Action Plan, which include policies and strategies across all waste streams.

The project was tasked with developing a Monitoring and Evaluation framework for the green waste management program in Funafuti. Alluvium's role on the project was to provide advice on the development of the framework and development of a program logic.
